Jury members: Aslı Gençtav, Elif Kurtaran Özbudak

UNIVHEX

Our senior project will be based on a social media app, it will be possible to reach this app from mobile platforms. The name of our app is Univhex. Our target group will be university students. Any student with a university mail address will be able to register and login to the app, since every school has their own email address. Students will be categorized by the part where the schools email extent. This means only the same school students can interact with each other. The essential purpose of our project is to increase the interaction between students on campus and ensure that they do not stay away from the current media flow in university life.

Right now, we're planning to make a mainstream page where people can post any content about school or themselves. Also, there will be a chat system which will be used for private chatting between university members. Every student will have their own profile page. This profile page will contain their personal information. Moreover, we are still making brainstorms in order to add new functionalities to our app. Any details about them will take place in the upcoming reports.
